

JFrame

```
classDiagram
    class JFrame
    class EventWindow["com.mycompany.client.gui.EventWindow"]
    EventWindow --|> JFrame
```

The diagram illustrates a class inheritance relationship. At the top, a white rectangular box with a thin black border contains the text 'JFrame'. Below it, a gray rectangular box with a thick black border contains the text 'com.mycompany.client.gui.EventWindow'. A solid blue arrow points vertically from the top center of the gray box to the bottom center of the white box, indicating that 'com.mycompany.client.gui.EventWindow' inherits from 'JFrame'.

com.mycompany.client.gui.  
EventWindow
