

com.mycompany.server.data.data
Base.DataAccessObjectBase

com.mycompany.server.data.data
Base.IDataAccessObject< Event >

com.mycompany.server.data.data
Base.EventDAO

```
classDiagram
    class DAO["com.mycompany.server.data.data  
Base.EventDAO"]
    class BaseDAO["com.mycompany.server.data.data  
Base.DataAccessObjectBase"]
    class BaseIDAO["com.mycompany.server.data.data  
Base.IDataAccessObject< Event >"]
    DAO --|> BaseDAO
    DAO --|> BaseIDAO
```

The diagram illustrates a class hierarchy. On the right is a gray-shaded box representing the base class, `com.mycompany.server.data.data.Base.EventDAO`. Two blue arrows point from this box to two white boxes on the left. The top white box represents the class `com.mycompany.server.data.data.Base.DataAccessObjectBase`, and the bottom white box represents the class `com.mycompany.server.data.data.Base.IDataAccessObject< Event >`. This indicates that `EventDAO` inherits from both `DataAccessObjectBase` and `IDataAccessObject< Event >`.
