

com.mycompany.server.data.data
Base.DataAccessObjectBase

com.mycompany.server.data.data
Base.IDataAccessObject< Ticket >

com.mycompany.server.data.data
Base.TicketDAO

```
classDiagram
    class BaseDAO["com.mycompany.server.data.data  
Base.DataAccessObjectBase"]
    class TicketDAO["com.mycompany.server.data.data  
Base.TicketDAO"]
    class IDAO["com.mycompany.server.data.data  
Base.IDataAccessObject< Ticket >"]
    BaseDAO <|-- TicketDAO
    BaseDAO <|-- IDAO
```

The diagram illustrates a class hierarchy. A central class, `com.mycompany.server.data.data.Base.DataAccessObjectBase`, is shown in a white box. Two other classes, `com.mycompany.server.data.data.Base.TicketDAO` and `com.mycompany.server.data.data.Base.IDataAccessObject< Ticket >`, are shown in gray boxes. Blue arrows point from the gray boxes to the white box, indicating that both `TicketDAO` and `IDAO` inherit from `Base.DataAccessObjectBase`.
